CrossLoom in operation

CrossLoom is Uma Soft's solution for an interwoven and harmonized IT environment. With CrossLoom, the boundaries of other Enterprise Service Bus systems are overcome. It integrates not only applications but also automation techniques and web services. Furthermore, CrossLoom features its own application framework.

In many companies, employees administer data redundantly across multiple systems. This results in process gaps which influence the efficiency of the entire process, leading to temporal and monetary losses.

CrossLoom offers necessary expansions that transfer your multiple business applications into an overall process. Furthermore, process and system gaps can be closed by integrating CrossLoom into your business processes. As a result, a transparent overall picture of your company emerges that enables you to not only live processes, but also manage them.

Generate your own applications with the CrossLoom framework and access your relevant data at any time from anywhere. Control, analyse and optimise complex processes and reduce your cost. From now on you will relieve your specialists in favour of value-generating activities.

CrossLoom gives your IT the safety to implement viable solutions today and in the future. The tasks of the different departments can be processed efficiently. They can increase their competitive advantage by automating accelerating processes. At the same time, this effective form of working increases staff retention.

Create the basis for a progressive IT with CrossLoom and choose the Extended Enterprise Service Bus against inefficiency.

CrossLoom: A short overview

Interwoven system environment

- Multiple interfaces
- Automated harmonisation of data
- Functional integration of third-party manufacturers
- Scalable horizontally

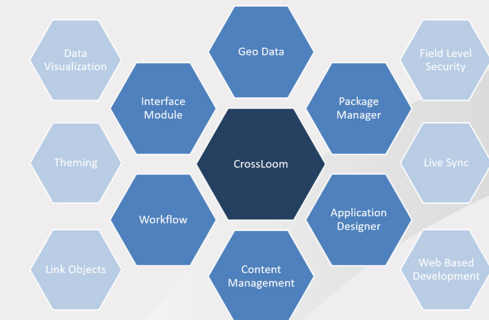

High security

- TLS secured data
- Trusted Code security model
- Structured authorisation concept

Modern technology

- Future-proof with HTML5
- Device-independent applications
- Live-synchronisation in a browser
- Offline forms

Efficient application development

- Browser-based development environment
- Graphical data structure designer
- Package-based transport (supports staging)

Simple administration

- Intuitive definition of object types
- Flexible integration of individual code blocks
- Application-based integration of programming languages (e.g. C#, JavaScript, HTML5, PowerShell)

CrossLoom

 Build bridges and create transparency

United for your support

UMa Soft sets great store by function-oriented software that offers the customer a maximum of influence on individual user guidance while maintaining standards. Easy to understand tutorials and the respective licences enable the customer to expand solutions independently and to adapt them to their individual needs.

In its role as implementation partner, 3Txpert implemented projects on the basis of UMa Soft software. With the expertise of having worked with CrossLoom as well as a broad process know-how, 3Txpert is predestined to ideally implement the customer's wishes. It does not make a difference whether they regard interface projects on the basis of the Enterprise Service Bus features or implementations in the application development environment. 3Txpert is the development partner of UMa Soft and strongly involved in the further expansion of CrossLoom.
